

Ana Gomes

Frontend Software Engineer | React, TypeScript, AI-Powered SaaS & Product Development

anaclimgo@gmail.com | +55 87 9 8831-0406 | [Linkedin](#) | [Github](#) | [Portfolio](#) | Pernambuco, Brazil

Summary

Software Engineer with experience building AI-powered SaaS products and complex B2B applications using React, TypeScript, Next.js, and Node.js. Experienced in owning features from concept to production, designing scalable frontend architectures, collaborating across product and engineering teams, and improving performance, maintainability, and developer experience in production systems. Passionate about building products that transform complex workflows into intuitive user experiences.

Experience

Software Engineer

Content Path | London, UK (remote)

09/2025 – Present

- Built and maintained full-stack product features using React, TypeScript, Node.js, and Supabase, developing scalable application systems, user-facing experiences, and data-driven workflows.
- Designed AI-powered workflows and orchestration systems, reducing token consumption and infrastructure costs by 70–85% while improving scalability and user experience.
- Improved frontend performance and maintainability by decomposing large React components (3k+ LOC) into modular architectures with clear separation of concerns.
- Designed and optimized API integrations, caching layers, and data flows, reducing API traffic by 90–95% while improving application responsiveness and reliability.
- Implemented automated testing and quality assurance workflows, contributing to stable releases and reliable CI/CD processes.
- Collaborated directly with founders and product stakeholders on product strategy, frontend architecture, scalability initiatives, and multi-tenant system design, helping shape technical decisions and long-term product growth.

Front-End Engineer

Pipoca Ágil | São Paulo, Brazil (remote)

01/2025 – 09/2025

- Developed production-ready web and mobile applications using React, React Native, Expo, TypeScript, and Tailwind CSS, delivering responsive interfaces, usability, and consistent cross-platform experiences for Android, iOS and web.
- Integrated REST APIs and collaborated closely with backend developers to implement scalable frontend features and improve application reliability.
- Introduced Docker-based development workflows, eliminating environment inconsistencies and significantly improving onboarding and deployment reliability across the team.
- Mentored junior developers through pair programming, technical guidance, and GitHub code reviews, helping improve development quality and team collaboration.
- Contributed to automated testing efforts using Playwright, Cypress, and Jest, helping ensure application stability and maintainable code quality.

Selected Projects

Forge AI

- Building an AI-native project orchestration platform that converts unstructured ideas into projects, sprints, and tasks using multi-agent systems.
- Designed specialized AI agents (planner, architect, task manager, debugging and analytics agents) that collaborate to maintain project consistency and adapt workflows dynamically.
- Experimenting with multiple LLM providers through OpenRouter, evaluating reasoning quality, latency, and cost trade-offs across different models.

Choosy

- Implemented real-time data synchronization and event-driven workflows using modern API and realtime communication patterns.
- Developed and maintained automated test suites using Jest, Playwright, and Cypress, improving reliability and reducing regressions across production releases.

Education

BSc in Communication and Media Studies – Estácio, Brazil (2022 - 2026)

Fullstack Scholarship – Ada Tech + Santander, Brazil (2025)

Languages

English: Full professional proficiency

Portuguese: Native

Skills

Frontend: React, TypeScript, Next.js, React Native, JavaScript, Redux, Zustand, Tailwind CSS, HTML5, CSS3, Responsive Design

Backend: Node.js, Swagger/OpenAPI, Ruby on Rails, Express.js, PostgreSQL, Supabase, REST APIs

Testing: Playwright, Cypress, Jest, Postman

Cloud & DevOps: Docker, CI/CD Pipelines, Github Actions, Git, GitHub

Product & Design: Figma, User Experience (UX), Product Development

Engineering Practices: Frontend Architecture, State Management (Redux, Zustand, Context API), Performance Optimization, Software Design, Agile/Scrum, Design Systems
