

Ana Gomes

Front-End Software Engineer | React, TypeScript, Next.js, AI Products

anaclimgo@gmail.com | +55 87 9 8831-0406 | [Linkedin](#) | [Github](#) | [Portfolio](#)

Remote (GMT-3) | Open to global remote opportunities

Summary

Front-End Software Engineer specializing in React, Next.js, and TypeScript, with experience building AI-powered SaaS products and complex B2B applications. Experienced in frontend architecture, performance optimization, API integrations, and translating product requirements into scalable user experiences while collaborating directly with founders and cross-functional engineering teams. Passionate about building intuitive products that combine exceptional UX with modern AI capabilities.

Experience

Software Engineer

Content Path | London, UK (Remote) | Part-time Contract

09/2025 – Present

- Took ownership of a complex AI-powered SaaS platform, stabilizing and evolving both frontend and backend systems across a complex monorepo while serving as the sole engineer responsible for product delivery.
- Collaborated directly with the CEO to define product strategy, frontend architecture, AI capabilities, and technical priorities, making end-to-end engineering decisions across the platform.
- Designed and implemented AI-powered content generation workflows, evaluating multiple LLM providers and prompt strategies before migrating to an image specialized multimodal model better suited for infographic generation, significantly improving output quality while reducing infrastructure costs by 70–85%.
- Refactored more than 20 frontend and backend modules, decomposing 3k+ LOC components into maintainable architectures and eliminating over 600 code quality and reliability issues identified through Cypress and SonarQube within my first three weeks on the project.
- Redesigned API integrations, caching strategies, and frontend data flows, reducing unnecessary API traffic by 90–95% while improving application responsiveness and maintainability.
- Established automated testing and quality assurance workflows using Cypress and SonarQube, creating a significantly more stable development environment and reducing recurring regressions throughout ongoing feature development.

Front-End Engineer

Pipoca Ágil | São Paulo, Brazil (Remote) | Volunteer

01/2025 – 09/2025

- Developed production-ready web and mobile applications using React, React Native, Expo, TypeScript, and Tailwind CSS as part of a cross-functional Agile team, delivering responsive, accessible user experiences across web, Android, and iOS.
- Integrated REST APIs with frontend applications, contributing to more reliable product workflows while collaborating closely with backend engineers and QA throughout sprint cycles.
- Worked within a multidisciplinary Agile team alongside frontend, backend, QA, cybersecurity, product, and Scrum professionals, participating in sprint planning, backlog refinement, daily standups, and feature delivery.
- Translated Figma designs and product requirements into reusable React components, delivering responsive, accessible interfaces while collaborating closely with UI/UX designers and backend engineers.

- Introduced Docker-based development workflows across frontend and backend teams, eliminating recurring “works on my machine” issues and standardizing local development environments for faster onboarding and more reliable deployments.
- Mentored fellow frontend developers through pair programming, onboarding, and knowledge sharing across React, TypeScript, React Native, and project architecture, strengthening team collaboration and accelerating ramp-up for new contributors.
- Contributed to automated testing initiatives using Playwright, Cypress, and Jest, helping improve release confidence and reduce regressions across production features.

Selected Projects

Forge AI

- Building an AI-native project orchestration platform with React, TypeScript, and Ruby on Rails that transforms natural language requirements into structured software engineering artifacts, including architecture, implementation plans, epics, sprints, tasks, and technical documentation through multi-agent workflows.
- Designed and implemented multi-agent orchestration for planning, software architecture generation, debugging, task decomposition, progress analysis, and engineering decision support.
- Integrated multiple LLM providers through OpenRouter, evaluating reasoning quality, latency, token efficiency, and operational cost to optimize AI performance across different engineering workflows.

Choosy

- Built full-stack features using React, TypeScript, Ruby on Rails, and PostgreSQL, implementing real-time synchronization and event-driven workflows across frontend and backend services.
- Developed automated test suites with Jest, Playwright, and Cypress while improving application stability and reducing regressions throughout feature development.
- Designed REST API integrations, authentication flows, deployment workflows, and production debugging workflows while supporting continuous delivery.

Education

BSc in Communication and Media Studies – Estácio, Brazil (2022 - 2026)

Fullstack Scholarship – Ada Tech + Santander, Brazil (2025)

Languages

English: Full professional proficiency

Portuguese: Native

Skills

Frontend: React, TypeScript, Next.js, React Native, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Redux, Zustand, Context API, Responsive Design, Web Accessibility (WCAG), Core Web Vitals, Performance Optimization, Figma

Backend: Ruby on Rails, Ruby, Node.js, Express.js, PostgreSQL, Supabase, REST APIs, GraphQL (Foundational), Swagger/OpenAPI

Testing: Jest, Cypress, Playwright, SonarQube

Cloud & DevOps: Docker, Git, GitHub, GitHub Actions, CI/CD, AWS (S3, EC2 - Foundational), Railway, Vercel

Engineering Practices: Frontend Architecture, Component-Driven Development, API Integration, Software Design, Design Systems, Debugging & Troubleshooting, Agile/Scrum, Test Automation

AI & GenAI: LLM Integration, AI Workflows, Prompt Engineering, Context Engineering, Multi-Agent Systems, RAG Concepts, Tool Calling, OpenRouter, Streaming Responses
