

Ana Gomes

Frontend Engineer | React, Next.js, TypeScript | AI-Powered Products

anaclimgo@gmail.com | +55 87 9 8831-0406 | [Linkedin](#) | [Github](#) | [Portfolio](#) | Pernambuco, Brazil

Summary

Frontend Software Engineer with experience building AI-powered SaaS products and complex B2B applications using React, Next.js, TypeScript, and modern frontend architectures. Experienced in translating product requirements and Figma designs into scalable, production-ready interfaces while collaborating closely with designers, product managers, and backend engineers. Passionate about building intuitive user experiences, improving frontend performance, and delivering maintainable, high-quality products in fast-paced startup environments.

Experience

Software Engineer

Content Path | London, UK (remote)

09/2025 – Present

- Built and maintained modern frontend experiences using React, Next.js, TypeScript, and Supabase, delivering scalable interfaces, complex user workflows, and AI-powered product features while collaborating closely with product and design teams.
- Designed AI-powered workflows and retrieval-based systems (RAG concepts), reducing token consumption and infrastructure costs by 70–85% while improving response quality and scalability.
- Improved frontend performance and maintainability by decomposing large React components (3k+ LOC) into modular architectures with clear separation of concerns.
- Designed and optimized API integrations, caching layers, and frontend performance strategies, reducing API traffic by 90–95% and improving responsiveness.
- Implemented automated testing and quality assurance workflows, contributing to stable releases and reliable CI/CD processes.
- Collaborated directly with founders and product stakeholders on product strategy, frontend architecture, scalability initiatives, and multi-tenant system design, helping shape technical decisions and long-term product growth.

Front-End Engineer

Pipoca Ágil | São Paulo, Brazil (remote)

01/2025 – 09/2025

- Developed production-ready web and mobile applications using React, React Native, Expo, TypeScript, and Tailwind CSS, delivering responsive interfaces, usability, and consistent cross-platform experiences for Android, iOS and web.
- Integrated REST APIs and collaborated closely with backend developers to implement scalable frontend features and improve application reliability.
- Translated complex product requirements and Figma designs into reusable React components, ensuring responsive layouts, accessibility, and consistent design implementation.
- Introduced Docker-based development workflows, eliminating environment inconsistencies and significantly improving onboarding and deployment reliability across the team.
- Mentored junior developers through pair programming, technical guidance, and GitHub code reviews, helping improve

development quality and team collaboration.

- Contributed to automated testing efforts using Playwright, Cypress, and Jest, helping ensure application stability and maintainable code quality.

Selected Projects

Forge AI

- Building an AI-native project orchestration platform that transforms natural language ideas into structured projects, epics, sprints, and tasks using multi-agent systems.
- Implemented agent orchestration workflows including planning, architecture generation, debugging, analytics, and task decomposition.
- Integrated multiple LLM providers through OpenRouter, evaluating latency, reasoning capabilities, token efficiency, and cost optimization across models.
- Designing AI-powered interfaces for human-in-the-loop workflows, contextual interactions, and intelligent decision support.

Choosy

- Implemented real-time data synchronization and event-driven workflows using modern API and realtime communication patterns with React, Typescript, PostgreSQL and Ruby on Rails.
- Developed and maintained automated test suites using Jest, Playwright, and Cypress, improving reliability and reducing regressions across production releases.

Education

BSc in Communication and Media Studies – Estácio, Brazil (2022 - 2026)

Fullstack Scholarship – Ada Tech + Santander, Brazil (2025)

Languages

English: Full professional proficiency

Portuguese: Native

Skills

Frontend: React, Next.js, TypeScript, React Native, JavaScript, Redux, Zustand, Tailwind CSS, HTML5, CSS3, Responsive Design, **Core Web Vitals, Performance Optimization**

Backend: Ruby on Rails, Ruby, Node.js, Express.js, PostgreSQL, Supabase, REST APIs, **GraphQL (familiar)**, Swagger/OpenAPI

Cloud & DevOps: Docker, Git, GitHub, GitHub Actions, CI/CD Pipelines, **AWS (S3, EC2 – foundational experience)**

Engineering Practices: Frontend Architecture, Web Accessibility (WCAG), State Management (Redux, Zustand, Context API), Software Design, Agile/Scrum, Design Systems, Debugging & Troubleshooting

AI & GenAI: LLM Integration, AI Workflows, RAG Concepts, Multi-Agent Systems, Tool Calling, Context Engineering, OpenRouter, Streaming Responses
